DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-4, 6-8 and 10-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant amended the claims to include the limitation "said catalytic composition is free of metal and compounds of metal selected from the group Mn (manganese) and Ni (nickel)". As currently written, it reads as though applicant is excluding metals from the catalytic composition. The exclusion of metals in the catalytic composition was not contained in the originally filed disclosure.
3. Furthermore, previous amendments are also not disclosed by the originally filed disclosure. For example, in the originally filed disclosure, Applicant does not specifically exclude Mn and Ni, as recited in the current claims. Mn and Ni are mentioned in the originally filed disclosure, however at no point does Applicant exclude these metals from the catalytic composition. More specifically, in paragraphs 5 and 39 of the specification, Applicant mentions that in the prior art, Ni and Mn were used as a

transition metal in a catalytic composition in order to protect palladium mounted on alumina from sulfur poisoning. Applicant then discloses in paragraph 6, that "sulfur containing contaminants may increase when transition metals are used because transition metals may form sulfates". However, these paragraphs do not explicitly disclose the exclusion of Ni and Mn compounds, as stated in the current claims.

Claim Amendments

4. It is noted that Applicant's claims (submitted 3/18/08) appear to contain notation for claim amendments (underline and stike-outs) based on claims submitted 2/12/08. However, the claim version submitted on 2/12/08 were not entered into record. The examiner requests acknowledgment of this in the reply to this office action. The examination will continue with the current version of the claims (submitted 3/18/08).

Response to Arguments

5. Applicant's arguments, filed 3/18/08 have been considered but are moot in view of the new ground(s) of rejection.

As the claims currently stand (as submitted on 3/18/08), the examiner cannot find any prior art that discloses a catalytic composition used for ozone removal that does not contain any metal.
